Fulchand Gulabchand Jewellers

The House of Gold, Online

Website Strategy, Experience Design and Development Proposal

Prepared by Impulse Digital
August 2026

Intellectual Property Notice

All original concepts, strategic recommendations, creative routes and materials contained in or accompanying this proposal are the exclusive intellectual property of Impulse Digital. They may not be reproduced, adapted or executed, in whole or in part, without Impulse Digital's prior written approval.

The opportunity

A trusted jewellery house is ready for a stronger digital presence.

1949

Since 1949, Fulchand Gulabchand Jewellers has built its reputation through high-quality gold, rich designs, skilled craftsmanship and long-standing customer relationships.

Today, Diksha is carrying this legacy forward with a refreshed identity and a clear view of where the brand should go next.

The website must bring this new chapter to life.

It should give people enough reason to explore the jewellery, understand the brand and make the effort to visit the store.

The main objective

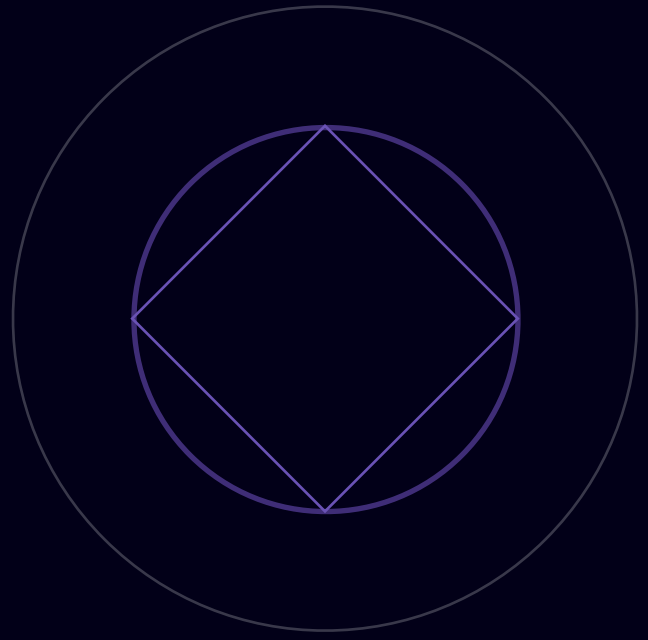

The website should make people want to visit the store.

This is not an e-commerce website.

The website is not expected to complete the purchase online. Its job is to build enough interest, trust and desire for the visitor to take the next step.

That next step could be:

- Booking a store appointment
- Sending a WhatsApp enquiry
- Calling the store
- Requesting a callback
- Asking about a product
- Getting directions

All these actions should eventually lead towards a store visit.

What the website must do

Five clear jobs.

Make the jewellery look desirable

Present every product with the space, scale and detail it deserves.

Help people explore

Make it easy to find jewellery by type, occasion, metal, gemstone or collection.

Tell the brand story

Show where the business came from, what it stands for and where Diksha is taking it next.

Turn interest into enquiry

Keep appointments, WhatsApp, calls and directions easy to access throughout the website.

Prepare the website for SEO

Build the technical and on-page foundations now, so ongoing SEO can begin later without rebuilding the website.

What this website will be

A brand and product experience. Not an online store.

The website will allow visitors to:

Explore approximately 200 products
View complete product details
Zoom into product images
Watch product or styling videos where available
Save products for a future store visit
Discover related jewellery
Enquire about specific pieces
Book an appointment
Contact the store directly

The website will not include:

Online checkout
Payment gateway
Public product prices
Price-based search
Price-range filters

Prices will not be displayed anywhere on the website.

The brand story

The story begins in 1949. It does not stay there.

Bhavana Ben Rajawat began the business by mortgaging her bridal jewellery.

That story speaks of courage, independence and belief. It deserves an important place on the website.

But the website cannot only talk about the past.

It must also show what that first decision made possible:

A jewellery house carried across three generations
Customer relationships built over decades
A strong reputation for gold and design
Craft skills protected and passed forward
Products that continue to change with customer tastes
Diksha bringing a new point of view to the business

The story will move through:

The Beginning → The Craft → The Relationships → The Change → The Future

The visual foundation

The new identity gives the website a clear starting point.

The brand system uses:

- Gulab as the main brand colour
- Ivory as the primary background
- Champagne and gold to add warmth and richness
- Wine for selective highlights
- Sentient for large headlines and editorial moments
- Manrope for navigation, body copy and product information

The brand book describes the identity as carrying three generations of goldsmithing into one mark, while balancing warmth, craft and heirloom value.

The website will bring this identity to life through layout, movement, product presentation and transitions.

The reference direction

What we should learn from the best jewellery websites.

Sunita Shekhawat

Strong collection pages, clear craftsmanship stories and visible appointment journeys.

Studio Renn

Clean layouts, strong visual restraint and jewellery presented like art.

Boucheron and Van Cleef & Arpels

Detailed product journeys, elegant movement and strong boutique appointment systems.

Sabyasachi

A strong example of making heritage feel current, relevant and alive.

These references will guide the quality and thinking.
They will not be copied.
The final experience must look and feel like Fulchand Gulabchand.

The experience we recommend

Rich, clean and easy to explore.

The website should feel:

01	**Spacious**	Enough white space for the jewellery to remain the centre of attention.
02	**Recognisable**	The colours, typography and movement should clearly belong to the brand.
03	**Story-led**	Products, collections, craftsmanship and people should appear as connected chapters.
04	**Easy to use**	The website should look beautiful without making visitors work hard to find what they need.
05	**Immersive**	Movement, video and interaction should make people want to continue exploring.

The visitor journey

From first visit to store visit.

1. Arrival

The visitor comes through Google, Instagram, Maps, advertising, press or a shared product link.

2. First impression

The homepage introduces the brand, featured collections and overall visual world.

3. Product discovery

The visitor explores by jewellery type, occasion, metal, gemstone or collection.

4. Product consideration

They view details, zoom into images, explore related products and save preferred pieces.

5. Planning the visit

Saved products are added to an appointment or shared with the store team.

6. Enquiry

The visitor books an appointment, sends a WhatsApp message, requests a callback or asks about a product.

7. Store experience

The store team already knows what the visitor is interested in before they arrive.

Terms of Use

Final product categories and collection names will be confirmed from the approved product list.

The homepage

A guided journey, not a crowded homepage.

1. Opening visual or film	A full-screen product visual or campaign film with a simple brand statement.
2. Featured collection	The newest or most important collection at that time.
3. Start exploring	Clear routes into jewellery types, occasions and collections.
4. Featured product	One standout piece shown through large visuals, movement and product details.
5. 1949 Forward	A short section connecting Bhavana Ben Rajawat's journey with Diksha's direction for the future.
6. The craft	Artisans, techniques and the making of the jewellery.
7. Product edit	A changing selection of jewellery rather than a large product grid.
8. Bespoke jewellery	A route for people looking for something personal or made specifically for them.
9. Trust	Customer stories, press coverage and other proof shared by the client.
10. Plan a visit	Store details, appointment, WhatsApp, phone number and directions.

Product discovery

Two hundred products should be easy to explore.

The website will include:

Product search
Suggested products and collections
Filters by jewellery type
Filters by occasion
Filters by metal

Filters by gemstone
Filters by collection
Featured products
Newest products
Recently viewed products

Related jewellery
Matching or complementary products
Mobile-friendly filters
Saved products

Prices will not be displayed.
There will be no price or price-range filter.

A private budget preference may be asked during the appointment or enquiry process, but it will not appear within the public catalogue.

Product detail pages

Every product page should build the desire to see the piece in person.

Each product page can include:

Large product images
Multiple product angles
Close-up details
Product or styling video, where available
High-resolution zoom
Product name
Product reference code
Jewellery type

Collection
Metal and purity
Gemstone details
Weight or dimensions, where approved
Design details
Craft details
Design inspiration
Care information

Related products
Complementary products
Save for My Visit
WhatsApp enquiry
Request specifications
Request a callback
Book a store appointment

The product name and reference code will automatically be attached to the enquiry.

Signature feature

Save for My Visit

Visitors can save products they like without creating an account.

The saved list can then be:

- **Attached to an appointment request**
- **Sent to the store through WhatsApp**
- **Shared with the store team**
- **Opened again through a private link**
- **Updated while the visitor continues browsing**

This gives the store team a clear idea of what the customer wants to see before the appointment begins.

It also gives the visitor a reason to return to the website.

Jewellery Concierge

Help visitors find the right jewellery without making them search through everything.

The Jewellery Concierge will guide visitors based on:

- **Occasion**
- **Jewellery type**
- **Style preference**
- **Metal preference**
- **Gemstone preference**
- **Traditional or contemporary design**
- **Personal purchase or gifting**
- **Bridal or celebration requirement**

Based on the answers, the website will recommend a relevant selection from the live catalogue.

A private budget preference may be included at the enquiry stage.

It will not be used as a public filter.

This module can be executed using AI or a video call. Current proposal considers an AI based approach

Other immersive features

Small details that make the website more memorable.

Through the Loupe

Selected products can use deep zoom and highlighted details to show craftsmanship more clearly.

1949 Forward

A scroll-based story connecting Bhavana Ben Rajawat's first step with the business being carried forward by Diksha.

Collections in Motion

Each collection can have its own visual pace and transition style while remaining part of the same brand.

Appointment Selection

Visitors can select the products they want to see before booking a visit.

These features will be designed to support product interest and store visits, not just visual effect.

Turning interest into store visits

Contact options should always be easy to find.

Main action

Plan Your Visit

Supporting actions

WhatsApp the Store
Enquire About This Product
Request Specifications
Request a Callback
Call the Store
Get Directions

The website will include:

Preferred appointment date and time
Saved products attached to appointments
Product-linked WhatsApp messages
Product-reference capture
Email notifications

Mobile contact buttons
Enquiry-source tracking
Confirmation messages
Calendar integration
CRM integration, subject to the selected CRM platform

Visitors will not need to manually copy product details before contacting the store.

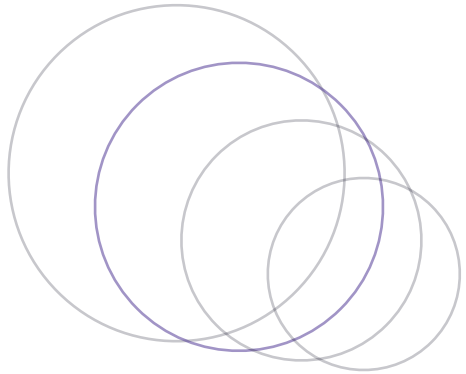

Movement and interaction

Beautiful movement, without making the website difficult to use.

The website can include:

Scroll-based image and text reveals
Parallax movement
Full-screen campaign films
Animated collection transitions
Product zoom
Product-image movement

Cursor interactions on desktop
Horizontal sections where they genuinely help the story
Page transitions
Navigation animations
Mobile-specific interactions
Branded loading moments

Movement will be used to guide attention and create interest.

It will not be added simply to make the website look technically complicated.

Campaign films and product videos can be created under a separate production scope if suitable material is not available.

Technical build

Built for speed, easy product updates and future growth.

Website framework

Next.js
React
Node.js
Server-side rendering
Responsive component system
GSAP or Framer Motion for selected interactions

Product system

Structured product database
Approximately 200 products at launch
Dynamic product pages
Dynamic collection pages
Search and filtering
Product creation and editing
Product reordering
Product archiving
Image and video management
Impulse-managed dashboard
A secure dashboard will be created for Impulse Digital to manage products and collections.
The dashboard will make regular product changes possible without needing to edit the website code each time.
Client-side dashboard access is not included in the current scope.

Infrastructure

Domain procurement
Hosting setup
SSL certificate
CDN
Staging website
Live website
Automated backups
Security setup
Basic monitoring
Business email setup for up to five email addresses

Integrations

Connected to the tools the store needs.

WhatsApp Business	Google Maps	Google Business Profile	Instagram feed	Appointment calendar
Website Hotmap	Google Analytics 4	Meta Pixel	Google Search Console	CRM integration, subject to the platform being confirmed

If the CRM is not finalised before development, the website will be built so that a CRM can be connected later.

One standard CRM integration can be included once the platform and required data flow are confirmed.

CRM licence costs, custom workflows, lead scoring and advanced automation are not included.

Ready for SEO

SEO starts later. The right foundation starts now.

The website will include:

- Clear website structure
- Search-friendly URLs
- Server-rendered content
- Editable page titles
- Editable meta descriptions

- Correct heading structure
- Canonical tags
- XML sitemap
- Robots file
- Breadcrumbs

- Internal links
- Image-alt-text fields
- Optimised image delivery
- Product structured data
- Local Business structured data

- Organisation structured data
- Google Analytics
- Google Search Console
- Event tracking
- Redirect controls

Ongoing SEO, keyword work, blog writing, backlink activity and monthly ranking work will be covered under a separate SEO engagement.

Scope of work

Strategy and UX

Discovery workshop
Business and website objective definition
User journey planning
Reference and category review
Sitemap
Website structure
Conversion planning
Wireframes for key page types
Content hierarchy and page guidance

Design

Two initial homepage design directions
One selected direction developed further
Desktop and mobile design
Website design system
Motion direction
Key interaction prototypes
Up to two consolidated revision rounds at each approval stage

Development

Next.js, React and Node.js development
Server-side rendering
Up to 200 products at launch
Product and collection pages
Search and filters
Impulse-managed dashboard
Save for My Visit
Jewellery Concierge
Product-linked enquiries
Appointment system
Approved integrations
Domain, hosting and email setup

Testing and launch

Functional testing
Mobile and desktop testing
Browser testing
Performance checks
Form testing
Integration testing
Analytics testing
Structured-data checks
Client UAT support
Website deployment
45-day post-launch technical warranty

12-week project timeline

Maximum delivery period: 12 weeks

The project will run through overlapping workstreams to meet the timeline.

Weeks 1 to 2

Discovery workshop
Website structure
Sitemap
Product-data format
User journeys
Content planning

Weeks 2 to 4

Wireframes
Homepage design directions
Final design direction
Key page designs
Motion prototype
Design approval

Weeks 4 to 9

Front-end development
Back-end development
Product database
Dashboard development
Search and filters
Appointment and enquiry journeys
Integrations

Weeks 6 to 10

Product upload
Content upload
Image and video integration
Motion implementation
SEO setup
Analytics setup

Weeks 10 to 11

Functional testing
Device and browser testing
Performance checks
UAT
Final corrections

Week 12

Final approval
Domain and hosting configuration
Production deployment
Website launch

The 12-week timeline depends on:

Complete product information being available by the end of Week 2
Product imagery being supplied according to the agreed schedule
Design approval by the end of Week 4

Feedback being shared within three working days
One person sharing consolidated client feedback
No major change to the approved sitemap or features after development begins

Delays in these inputs will affect the launch date.

Client inputs and dependencies

The client will need to provide:

Final logo and brand files
Approved brand history
Founder and family archive material
Product information for up to 200 products
Product names and reference codes
Metal, purity and gemstone information

Product images
Product descriptions or approved raw information
Collection names and descriptions
Store photographs and videos
Artisan and craftsmanship material
Store address, timings and contact details

Press coverage
Customer testimonials
WhatsApp Business access
Google Business Profile access
Instagram and Meta access
Google account access

CRM access, where applicable
Appointment availability and process
Privacy policy and other legal content
One authorised person for approvals

Product information must be shared in the agreed spreadsheet format.

Cleaning or rebuilding incomplete product information may require additional time and cost.

What is not included

The website scope does not include:

Product photography
Store photography
Campaign-film production
Artisan-film production
Three-dimensional product modelling
AR jewellery try-on
Virtual-reality experiences
E-commerce
Payment gateway

Public pricing
Price-based search or filters
Real-time stock management
ERP integration
Custom CRM development
Advanced CRM automation
WhatsApp chatbot development
Ongoing SEO
AMC

Additional languages
Full website copywriting
Writing 200 individual product descriptions
Legal-policy drafting
Paid media
Paid third-party subscriptions
Product and content updates after launch

Any increase beyond 200 launch products or major change to the approved scope will require a revised estimate.
