FULCHAND GULABCHAND

JEWELLERS

The house of gold.

Three generations of goldsmithing, carried into a single mark. Everything from here, every piece, storefront and page, holds to the same discipline: clean geometry, precious metal, and nothing decorative that the craft has not earned.

MASTER MARK	PRIMARY COLOUR	TYPEFACES	CONTENTS
Crimson on White	#A70000	Futura · Manrope	Four sections

01 Master and reverse

The FG monogram, held in a circle, is the mark. It is reproduced in **crimson on white** by default and everywhere it can be. The reverse exists for one reason only: surfaces where a white ground cannot be printed, dyed or lit.

MASTER · USE BY DEFAULT 7.95:1

Crimson on White

Stationery, catalogues, web, invoices, tags, shopfront glass, packaging exteriors. Gold keyline optional and never required.

REVERSE · FALLBACK ONLY 7.95:1

White on Crimson

Only where white cannot be reproduced: coloured cloth, kraft, anodised metal, embroidery, single-colour signage, dark app icons.

CONSTRUCTION & CLEAR SPACE

Monogram width · 52 per cent of the circle's diameter, optically centred.

Clear space · 25 per cent of the diameter on all four sides. Nothing enters it.

Keyline · gold, 1.25 per cent of the diameter. Optional; drop it below 20 mm.

Minimum size · 14 mm in print, 48 px on screen.

Keyline drops at small sizes

NEVER

Gold on crimson. Falls to 2.55:1.

Monogram crowding the circle.

Shadows, bevels or gradients.

Rotating or recolouring the FG.

02 The lockups

Two arrangements, both crimson on white. Stacked is the primary; horizontal exists for shallow spaces such as web headers, invoices and shop fascias. The contained mark may also stand alone where the name is already present.

04 Crimson, Gold & White

Crimson carries the brand, gold marks the metal, white gives it air. Hold to roughly 60 white, 30 crimson, 10 gold, so gold always reads as an accent and never as a fill.

Crimson has no light tints: mixed with white it turns pink, which is outside this system. Go darker for depth and to the champagne family for lightness. For foil and press, match to a physical chip rather than a screen; nearest coated reference is Pantone 187 C, to be confirmed against a drawdown.

05 Combinations in use

Six pairings cover every application, ordered by how often they should appear. Anything at 4.5:1 or above is safe for body copy; below that is display or decoration only.

ALWAYS

- The master mark first: crimson on white, wherever white can be reproduced.
- Crimson and gold separated by white or champagne.
- One crimson per surface. It is a statement, not a texture.
- Gold foil set larger than flat gold: foil legibility varies with the light.

NEVER

- The reverse mark by preference, where white was possible.
- Gold body copy on white (3.1:1), or crimson type on gold.
- Gold monogram inside a crimson circle (2.55:1).
- Pink tints of crimson, gradients, or a second red.

Supplied artwork: master (crimson on white, with and without keyline), reverse (white on crimson), and gold on oxblood for foil. Anything else is a new request, not a variation.
